A
Validation cohort: calibration by decile
Observed 5-year survival (Kaplan-Meier)
Mean predicted 5-year survival
Decile 10 (most favourable)
75.8% observed; 58.0% predicted
Perfect calibration
50 or more with 5-year follow-up
Fewer than 50 with 5-year follow-up
B
Operation period (development and validation)
Observed / predicted 5-year survival
0.96
1.03
1.09
1.23
n(5y) = 822
n(5y) = 1,272
n(5y) = 332
n(5y) = 109
1990–2004
2005–2009 (training)
2010–2012 (validation)
2013–2015 (validation)
